

Importance of Control Stages in Quality Control

Ogun Basgoz

Quality Manager, Mitas Energy, Eski Guvercinlik St. No:113 Gazi Ankara / Turkey

We, as Mitas Energy, are the third biggest Energy Transmission Lines manufacturer in the world according to global electricity transmission towers market report 2015-2020, which is published by Global Transmission Research in October 2014. Project based manufacturing method is combined with serial production in our factories due to the nature of the product. That is why, neither serial production control methods nor project based control approaches works efficient individual.

We experienced that the control stages and tools are so important during manufacturing. Small little changes can cause butterfly effect during manufacturing in a good way. We would like to share our knowledge during congress with a poster presentation about it.
